

## SOUTHWEST ONCOLOGY GROUP

**Group Chair's Office**  
24 Frank Lloyd Wright Drive  
P.O. Box 483  
Ann Arbor, Michigan 48106

**Operations Office**  
4201 Medical Drive, Suite 250  
San Antonio, Texas 78245

**Policy Memorandum No. 31**  
**Subject:** HIPAA Policy  
1988  
**Departments Affected:** All  
Name

**Page 1 of 2 pages**  
**Original Release Date:** February  
**Original Title:** Use of Full Patient  
**Renamed and Re-Titled:** April 2004  
**Revision Date:** April 2010

### HEALTH INSURANCE PORTABILITY AND ACCOUNTABILITY ACT (HIPAA) PRIVACY RULE POLICY

The Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule went into effect April 14, 2003. The Privacy Rule places restrictions on how Covered Entities may use and disclose Protected Health Information (PHI). This policy serves to document the policies and procedures developed within the Southwest Oncology Group to acknowledge this regulation.

- The Southwest Oncology Group Operations Office and Statistical Center are **not** covered entities. Therefore, the Group is not mandated to comply with the HIPAA Privacy Rule standards. However, it is recognized that our members institutions are, so the Group will comply with the regulations as outlined below. Covered entities include healthcare plans, healthcare clearinghouses, and healthcare providers. Researchers are not covered entities, in part because they are not healthcare providers unless they provide treatment along with their research and bill for their services using a HIPAA Standard Transaction. The Southwest Oncology Group does not provide treatment because it does not provide its research subjects with care, services or supplies for treatment purposes (45 C.F.R § 160.3; 65 Fed. Reg. 82477).
- The Southwest Oncology Group is not a Business Associate of any of its members. Researchers are not business associates of covered entities. (Standards for Privacy of Individually Identifiable Health Information, Office of Civil Rights HIPAA Privacy, pp. 43, 47, December 3, 2002, collected 12/11/2002 at <http://benefitslink.com/articles/finalprivacy20021203.pdf>.) To be a Business Associate, a person or entity must perform a function involving Protected Health Information (PHI). The department of Health and Human Services (HHS) has taken the position that when an entity conducts research, it does not perform a function "on behalf of" a covered entity and, therefore, researchers are not business associates. (Standards for Privacy of Individually Identifiable Health Information, Office of Civil Rights HIPAA Privacy, pp. 43, 47, December 3, 2002, collected 12/11/2002 at <http://benefitslink.com/articles/finalprivacy20021203.pdf> [45 C.F.R. § 160.103].) Furthermore, research is not one of the additional special services for which HHS requires a business associate agreement. Those special services are actuarial, accounting, consulting, data aggregation, management, administrative, accreditation, or financial services (45 C.F.R. § 160.103).
- **All patients (initially) registered to Group-coordinated studies on or after April 14, 2003, must have signed a patient authorization form** so that PHI may be released to the Group.
  - Recommendations for Authorizations

It is expected that patient authorizations will be worded so as to allow the release of PHI to the Southwest Oncology Group for the life of the study. While the authorization may be integrated within other documents related to the study, the Group recommends that the authorization form and Informed Consent document be kept separate for the following reasons:

- The important distinctions between privacy risks and risks of study treatment are better maintained.
  - There may be times when it is necessary for the physician to release PHI to determine whether a patient is eligible for a particular trial. In these cases, it will be necessary to have a signed authorization prior to having the patient enroll in the trial and sign an Informed Consent.
  - NCI Cooperative Groups, in collaboration with the Office for Human Research Protections and the Food and Drug Administration, developed and have generally adopted and employed a consistent approach to a study informed consent template. Different institutions may wish to adopt different approaches to the content of the HIPAA authorization. Combining this with the model consent would risk sacrificing some of the consent consistency.
  - HIPAA regulations allow the institution to deny participation in a clinical trial, should the patient refuse to sign an authorization to release PHI to the researcher. Further, it is required by the regulation that this fact be included in the authorization for release of PHI. Including this language in the informed consent document could appear to "coerce" the patient into agreeing to the release of PHI in order to participate in the trial.
  - Informed consent documents must be approved by the appropriate Institutional Review Board (IRB). If the authorization is combined with the informed consent, the IRB must approve the language. The IRB is not required to approve the separate authorization.
- **PHI for patients registered to Southwest Oncology Group-coordinated studies prior to April 14, 2003, may be released without further authorization**, according to the HIPAA Transition Provisions that say that a consent form signed prior to April 14 may act as an authorization after April 14.
- It is expected that patient authorization forms will be specific to each institution's requirements, and comply with local laws. The Southwest Oncology Group has drafted a *model* authorization form that may be downloaded from <http://swog.org> (members section, HIPAA bulletin board), and be modified as needed.
  - Ongoing protocols as of the implementation date were not amended to include a patient authorization form. The model patient authorization form on our website serves as the template for ongoing studies. Protocols activated after April 14, 2003, will include study-specific patient authorization forms.
  - With the exception of patient initials and dates, the only PHI the Group collects is at patient registration. These data are stored under an additional layer of security in the Southwest Oncology Group database, and access is severely restricted. Some older forms may still request full patient name, but the Group will require that **only initials be provided** now and in the future on all data submitted.
  - With the exception of patient initials and dates, the Southwest Oncology Group will release no PHI, except as required by law. It may utilize PHI internally for research purposes only, and PHI may be released back to the submitting institution under limited circumstances.
